

## Endangered Culture Ash Tree

One of the UK's most beloved trees, since 2012 the ash tree has been beset by a deadly fungus that has caused extreme ash dieback throughout the UK.

If no action is taken, it is estimated that tens of thousands of ash trees will die, potentially changing the UK landscape forever.

Not only is this a loss of biodiversity, healthy and thriving woodlands are also important carbon-locking ecosystems.

### Prompts:

- How would you use this practice in your community if it really existed?
- Consider how the crisis is affecting the animal, plant or land you are taking care of?
- What would a future that nourished and protected your plant, animal or land look like? Imagine three ways your tomorrow would be different to today's reality.
